

The Smart Meaningful Use EHR™

How can I demonstrate meaningful use and coordinate care of patients with chronic conditions?

As a Medicare or Medicaid provider, you must document and report meaningful use adherence between 2011 and 2014 to qualify for incentives in the \$43,000 to \$63,000 range and avoid future penalties. **Let us show you how you can deliver more effective chronic care and qualify for meaningful use incentives by selecting affordable modules that suit your workflow.** SmartEHR modules allow you to supplement your legacy EHR without duplicate data entry or to create a complete EHR suited to your particular practice needs. SmartEHR modules will be ready for certification when CMS publishes EHR certification procedures in late 2010. Providers who sign up for 2011 module subscriptions, may use them at no-cost for the remainder of 2010.

Small, independent health care practices cannot afford to pay administrators for constant reminders about ever-changing regulatory requirements and for preparation of reports about their regulatory adherence. They cannot waste money on isolated, non-interoperable EHRs that fragment patient information and breed safety risks.

The Smart Meaningful Use EHR™ is interoperable and modular including comprehensive personal health records, Smart PHRs®, for a provider's patient population. The software as services Smart EHR automatically:

- Supports providers in:
 - compliance with HIPAA and HITECH security and privacy rules
 - early detection of potential safety errors and documentation of preventive action
 - meaningful use adherence, documentation and reporting
 - quality indicator adherence, documentation and reporting
 - coordination of complex patients' care within and across practices
 - referrals and transitions of care
 - cross-provider, cross-condition disease management
- Auto-updates each patient's multi-source, comprehensive SmartPHR with:
 - provider, pharmacy, lab and imaging data
 - remote monitoring device data
 - patient observations of treatment compliance, symptoms, and side effects
- Supports patients in:
 - documented enforcement of their privacy preferences
 - simplified collaboration with primary-care and specialty providers
 - entry and updating of clipboard registration information
 - entry, graphic display and automated provider alerts about self-observations
 - receipt of encounter and hospital-discharge summaries
 - secure communications and scheduling with providers
- Permanently stores all data without deletion options and with tags identifying data sources
- Gives authorized users 24X7 access to SmartPHR clipboards, care plans and observations from:
 - web-connected and mobile devices
 - iPhones and iPads

- Automates continuity of care data exchanges between SmartPHRs and authorized:
 - provider EHRs
 - data repositories
 - health information exchanges

The Smart Meaningful Use EHR™				
Capabilities (MU=per Meaningful Use Requirements)	Bronze	Silver	Gold	Platinum
Audit Trail & Report Module	✓	✓	✓MU	✓MU
Calendar (C) & Networked Scheduling (S) Module (For all authorized users)	C	C	C	C & S
